

# REOPENING SCHOOLS: INFORMATION FOR STUDENTS AND FAMILIES

## Guidelines and Recommendations for COVID-19 Response

Vilas County schools are ready to open and they've done their homework! All districts have a plan in place for both preventing and mitigating COVID-19 infection in their buildings. The schools are using important tools like Wisconsin Department of Instruction's Education Forward guidance<sup>1</sup> and the School Health Services Interim COVID-19 Infection Control and Mitigation Toolkit<sup>2</sup> to inform their COVID-19 response plans.

### WHEN SOMEONE TESTS POSITIVE FOR COVID-19

#### Does the school need to close?

- Not necessarily. If the center or school is able to remove everyone from areas that need to be cleaned, the center or school may clean those areas without closing.
- Some children, students and staff with potential exposure may be asked to temporarily not attend while the center or school works with public health to determine who had close contact with the person with the positive test. This might mean quarantining a full classroom or more than one classroom if children or students mixed.

#### Who will be notified that they were exposed?

People who were within 6 feet of the person who tested positive for 15 minutes or more (close contact). Public Health will work with the school to notify these individuals/their families. People who do not receive a phone call or letter from public health did not have *known* close contact.

#### Who cannot come to school after someone is diagnosed with COVID-19?

- Children, students and staff who had close contact with the person who tested positive will need to stay home until 14 days after their last contact with the person who tested positive. This may be different for different people depending on when they attended or last worked with the person who tested positive.
- A close contact cannot come back early if they have a negative test during this exclusion period.

### **When can someone who had a positive test return?**

- People with a positive test can return when they have been fever-free for 24 hours, their other symptoms have improved, and it has been at least 10 days since their symptoms started. This may be shorter than the time a close contact needs to stay home.
- People with a positive test do not need a negative test to return.

### **Can siblings of someone who tested positive come to school?**

No, siblings would have had close contact at home and must stay home until they meet public health criteria for returning (the exact timeline will vary by individual).

### **Can caregivers of someone who tested positive come to school?**

- No, caregivers would have close contact at home and must stay home until they meet public health criteria for returning (the exact timeline will vary by individual).
- If a child or student who tested positive is ready to return before their caregivers have met their public health criteria, the center or school may make arrangements to meet the family outside at arrival and departure so the child or student can attend.

### **Can caregivers and siblings of a close contact come to school?**

Yes, they were not exposed to someone with COVID-19 so they can still come.

### **If someone has a positive COVID-19 test, returns, and is exposed to someone else who has a positive test after they return, do they need to stay home after that exposure?**

No, if someone has a confirmed positive viral test for COVID-19, they do not need to stay home if they are exposed again in the future.

### **If someone who never had a positive test gets exposed again, do they need to stay home again?**

Yes, people who have close contact with someone with a positive test need to stay home each time they have an exposure unless they have had a positive test in the past.
